PROTECTING CASH HANDLING WITH INK STAINING | INK DYE

The protection of bank notes during their handling and movement continues to be an attractive target for criminals. Developing an effective deterrent and visible reaction to mark the notes has resulted in Ink Dye becoming the chosen solution for many organisations.

With the added benefit of consumer knowledge and their understanding of what Ink Dye is and that it's purpose is used for staining stolen currency, the financial industry has the lead on detecting and the removing spoiled bank notes from circulation.

Ink Dye products have been in production for many years. Companies who rely on an effective and immediate protection during the movement of cash will turn to these products for peace of mind.

● Safety Advantages

- Automatically stains the cash when the machine is attacked
- Provides protection against ram raids and grinding attacks
- Technology is integrated into the lid or body of the cassette and is invisible to both customers and criminals
- The system can be linked to an existing alarm, the cash dispenser, and the safe's electronic lock to provide a multi-layered security solution
- Cassettes are easily identified by industry acknowledged labelling
- State-of-the-art inks with markers guarantee optimal staining performance and traceability

Customer Advantages

- Compatible with popular electronic locks and automatically arms and disarms the cash cassettes, removing the need to manage physical keys or remote controls
- Clear visual and audible signals are easy for staff to operate during normal daily use
- Simple integration by customers either as a pre-assembled solution or as an easy to configure kit of parts
- Cassettes are configured to allow extensive connectivity with the machine and external alarm systems. Flexible architecture provides for future-proof add-ons of emerging anti-fraud sensing technology.

Financial Advantages

- Modular components easily and quickly snap-fit into all major types of machine cassettes to significantly reduce the total cost of ownership compared to traditional ink staining products
- Simplifies the assembly task of the cassette by using a pre-assembled cassette lid or an easy to configure kit of parts to the customer
- Lowered skill required to maintain units reduces maintenance cost significantly.

Exclusive partnership with 3SI Security Systems

Cennox is the exclusive partner with 3SI Security Systems for the United Kingdom & Ireland. Partnering our two organisations has enabled us to provide the full suite of security products for our customers.
